

Developing a Backend Admin for Learner's Academy.

Developer name: Mohamed Jamal

Core concepts that were used in the project are:

- Database
- Collections
- Exception Handling

Technologies that were used in the project are:

- Data structures such as arrays.
- Handling exceptions.
- Servlets
- Html
- CSS
- Tomcat Apache 8.5
- Java classes
- MySQL

Application features:

- Login page for a single signing to the website.
- Navigation bar to navigate through the website and list all the classes, subjects, teachers, and students.
- Close the application at any time.

The application was done in three sprints, the first sprint for sprint planning and preparing. Next, two sprint for developing and testing the application. Moving on to the first sprint we planned the flow of the development and how we are approaching the project. Furthermore, we developed the database tables and entered data. Then, we created java classes for each table in the database. Moving on, to the developing the servlets to link the classes and the implementation of the code. Then we created a view in the database so we can print the data we want from each table. Later we created a java class for that view. Then we implemented the navigation bar to make it easier for the admin when he/she use the Backoffice. Next, we created the homepage before logging in, the main page after logging in and the login form. We also created a servlet for login implementation. Furthermore, we created the option to logout from the website if desired. Finally, we tested the website and added a bit of CSS so that it presented better.

Below you will find screenshots of the application:

Learning Academy

Project Details:

Learner's Academy is a school that has an online management system. The system keeps track of its classes, subjects, students, and teachers. It has a back-office application with a single administrator login.

Developer's Details:

Rahaf Emad Alrabeea

Login

The above screenshot displays the welcome menu and the option to login in the website.

Username:

Password:

The admin will enter his/her credentials to log in which are “admin” and “admin”.

Learning Academy

[View Classes List](#) [View Class Information List](#) [View Students List](#) [View Subjects List](#) [View Teachers List](#)

The navigation bar after login.

[Logout](#) [View Classes List](#) [View Class Information List](#) [View Students List](#) [View Subjects List](#) [View Teachers List](#)

Classes List

Class Id	Section	Subject Id	Teacher Id
100	1	20	1
101	2	10	2

This is the classes list where it shows all the classes.

[Logout](#) [View Classes List](#) [View Class Information List](#) [View Students List](#) [View Subjects List](#) [View Teachers List](#)

Class Information List

Class Id	Section	Subject Name	Teacher's Name
100	1	Mathematics	Neel John
101	2	English	Ali Fayad

This the class information list page where it shows the information of each class.

[Logout](#) [View Classes List](#) [View Class Information List](#) [View Students List](#) [View Subjects List](#) [View Teachers List](#)

Students List

Student Id	First Name	Last Name	Age	class Id
1	Fatma	Ali	18	101
2	Abdulaziz	Mubarak	23	100

This is the students list page where it shows all the student information.

[Logout](#) [View Classes List](#) [View Class Information List](#) [View Students List](#) [View Subjects List](#) [View Teachers List](#)

Subjects List

Subject Id	Subject Name
10	English
20	Mathematics

This is the subjects list which shows the subject name and id.

[Logout](#) [View Classes List](#) [View Class Information List](#) [View Students List](#) [View Subjects List](#) [View Teachers List](#)

Teachers List

Teacher Id	First Name	Last Name	Major
1	Neel	John	English literature
2	Ali	Fayad	mathematics

This is the teachers list with all the information of the teachers.

There is also the option to log out from the website.

To conclude, this project will help the admin a lot in his/her everyday use. It is developed in a way to make their life easier as it is user-friendly and easy to learn. In the future, we would like to add enhancements such as creating, updating and deleting data as it would also enhance the admin a lot more. This project aims to design and develop a backend administrative portal for the Learner's Academy using Java EE technologies. The goal of this project is to apply servlet, jsp and JDBC concepts.

This is the link to github: <https://github.com/mjmaahs/learning-academy>

you will also find the code of the database below.

create database administrativeManagmentSystem;

```
CREATE TABLE `subjects` (  
  
    `subject_id` int NOT NULL,  
  
    `subject_name` varchar(55) NOT NULL,  
  
    primary key (`subject_id`)  
  
) ENGINE=InnoDB DEFAULT CHARSET=utf8mb4;  
  
INSERT INTO `subjects` (`subject_id`, `subject_name`) VALUES  
  
(10, 'English'),  
  
(20, 'Mathematics');
```

```
CREATE TABLE `teachers` (  
  
    `teacher_id` int NOT NULL,  
  
    `fname` varchar(55) NOT NULL,  
  
    `lname` varchar(55) NOT NULL,  
  
    `major` varchar(55) DEFAULT NULL,  
  
    primary key (`teacher_id`)  
  
) ENGINE=InnoDB DEFAULT CHARSET=utf8mb4;
```

```
INSERT INTO `teachers` (`teacher_id`, `fname`, `lname`, `major`) VALUES  
  
(1, 'Neel', 'John', 'English literature'),  
  
(2, 'Ali', 'Fayad', 'mathematics');
```

```
CREATE TABLE `classes` (  
  
    `class_id` int NOT NULL,
